

ExtraVision

Tested at MIRA

All temporary traffic barriers must be able to withstand three different classes of wind speeds with the use of a ballast. The standard **BS 8442:2006** states the three classes as the following:

- Class A: 26.3 m/s (58mph)
- Class B: 17.6 m/s (39mph)
- Class C: 8.7m/s (19mph)

The ExtraVision Barrier system was tested under strict conditions at the Full Scale Wind Tunnel at Mira to determine at which wind speeds the barrier can withstand. Below are the results and guides as to the recommended ballast weight for each Wind Class:

<p>Class C Passed</p> <p>Withstood up to 19.3mph</p> <p>Recommended Ballast Weight: 0Kg</p>	
<p>Class B Passed</p> <p>Withstood up to 43.6mph</p> <p>Recommended Ballast Weight: 40Kg</p>	
<p>Class A Passed</p> <p>Withstood up to 60.4mph</p> <p>Recommended Ballast Weight: 90Kg</p>	
<p>Boxed Passed</p> <p>Withstood up to 62.0mph</p> <p>Recommended Ballast Weight: 60Kg</p>
